Introduction

QCL POS is a software engineered specifically for the unique needs of QCL. The System is designed to be highly configurable and adaptable to the needs of different shops, stations, products, staff members, and customers. This manual is intended for system administrators and staff members who will be using and supporting this software.

With QCL POS, you can easily manage your shops, products, staff members, and customers. You can configure the system to suit your specific needs.

This manual provides detailed instructions for installing and configuring the system, as well as for using the various features and functionalities of QCL POS. It covers topics such as setting up shops, managing products, preparing orders, processing payments, and managing customers. It also covers advanced topics such as creating custom reports.

POS Software Icon

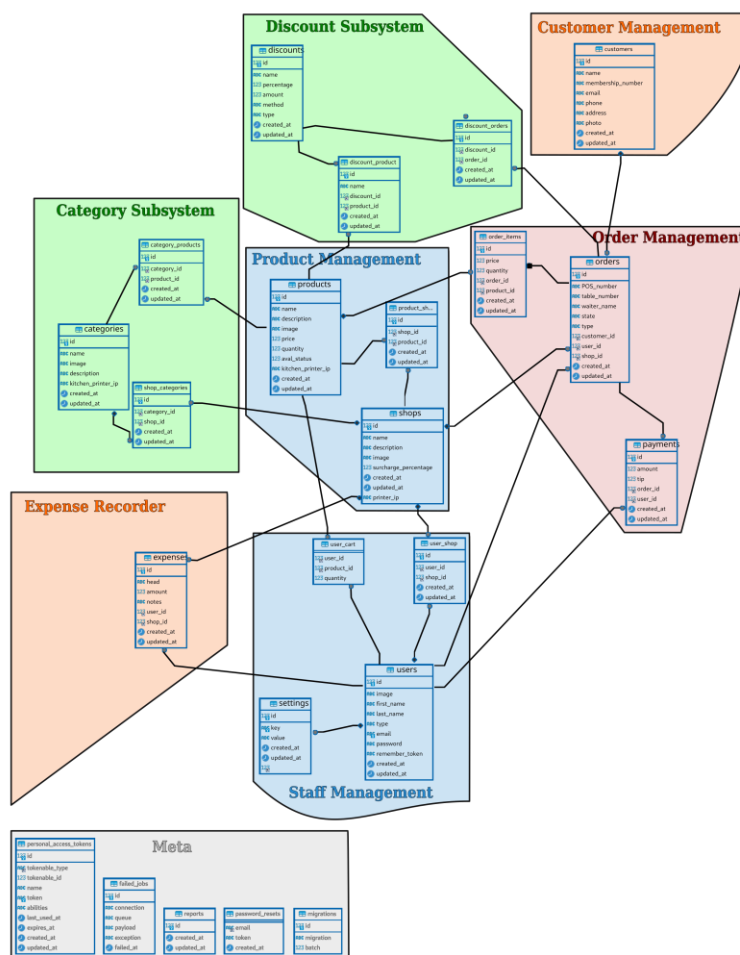

We hope that this manual will be a valuable resource for you as you start using QCL POS. If you have any questions or need further assistance, please don't hesitate to reach out to us.

System Design Overview

Architecture

QCL POS is built using Laravel, a PHP framework. Laravel is designed to provide a rich set of features and tools. It leverages Livewire, a library that allows for real-time, interactive updates to a web page. When you make changes to an order, for example, the changes are automatically reflected on the screen without the need for a page reload. This makes the user experience much more responsive and intuitive.

QCL POS is housed within a virtual machine (VM), which is a good solution for on-site deployment. By using a VM, you can run QCL POS on your own hardware without the need for additional hardware or software. A VM provides a self-contained environment that can be easily installed and managed. It also allows you to easily update and manage the software within the VM, without affecting the rest of your systems.

Database Design

System Users

The system is intended to be used by the following types of users:

1. **Administrator:** Has full control over the system and can perform any task. Can configure shops, products, staff members, and customers.
2. **Cashiers:** These users are responsible for processing orders and managing the day-to-day operations of the shop. They can create and edit orders as well as manage payment.
3. **Order Takers:** These users are responsible for getting orders from the customers. They can create orders, add products, and monitor the status of orders. Typical usage is through Tablet.
4. **Accountants:** These users are responsible for managing the financial aspects of the shops. They can view and manage payment records, generate reports, and perform other financial tasks.
5. **GRO (Guest Room Operator):** These users are like cashiers.

System Stations

The system is intended to be used at the following stations/ terminals:

1. **Administration:** A Desktop PC is required for administration purposes. Accountants & Cashiers may also use such terminals.
2. **Cashier Terminals:** Ideally a PC is suitable for a cashiers job, however it can also be done via a Tablet Device.
3. **GRO Terminal:** Ideally a PC is suitable for the job, however it can also be done via a Tablet Device.
4. **Order Tablet:** Ideally a Tablet Device is suitable for the job, however it can also be done via a PC as well.

Main Features

Product Management

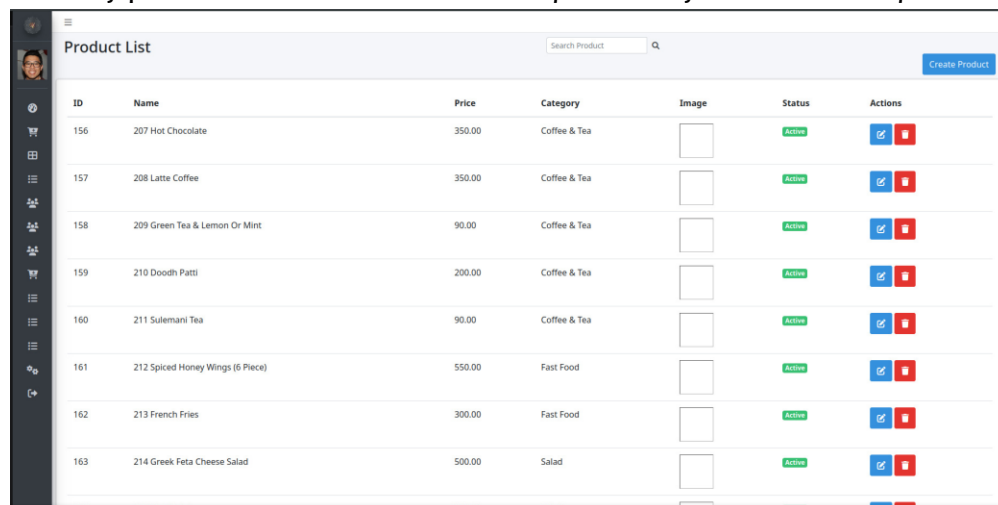

Products are anything that can be sold at a Shop. Every product has following fields to hold specifications :-

- ID
- Name
- Description
- Price
- Category

Products need to be set up once before functioning of the system. At later stages products can be edited, deleted or updated as per requirement. Typical usage includes revision of rates on Quarterly basis.

Pages

1. **Product Index.** Lists all the products available in POS System. Users can View/ Edit/ Delete any product. Users can search for a product by name or description.

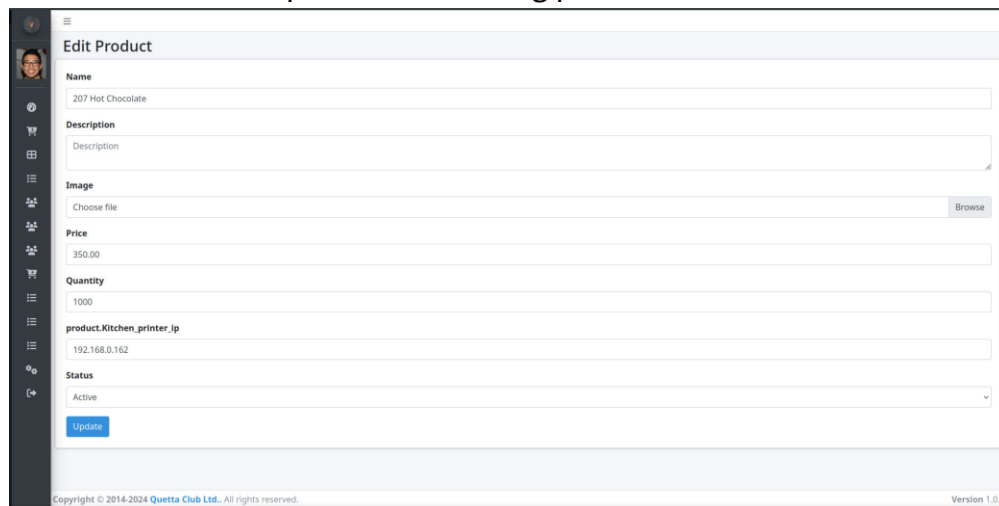

The screenshot displays the 'Product List' interface. It features a search bar at the top right with the placeholder text 'Search Product' and a magnifying glass icon. A 'Create Product' button is located in the top right corner. The table below lists products with the following columns: ID, Name, Price, Category, Image, Status, and Actions. The 'Status' column shows 'Active' in green. The 'Actions' column contains icons for edit (pencil) and delete (trash).

ID	Name	Price	Category	Image	Status	Actions
156	207 Hot Chocolate	350.00	Coffee & Tea		Active	 
157	208 Latte Coffee	350.00	Coffee & Tea		Active	 
158	209 Green Tea & Lemon Or Mint	90.00	Coffee & Tea		Active	 
159	210 Doodh Patti	200.00	Coffee & Tea		Active	 
160	211 Sulemani Tea	90.00	Coffee & Tea		Active	 
161	212 Spiced Honey Wings (6 Piece)	550.00	Fast Food		Active	 
162	213 French Fries	300.00	Fast Food		Active	 
163	214 Greek Feta Cheese Salad	500.00	Salad		Active	 

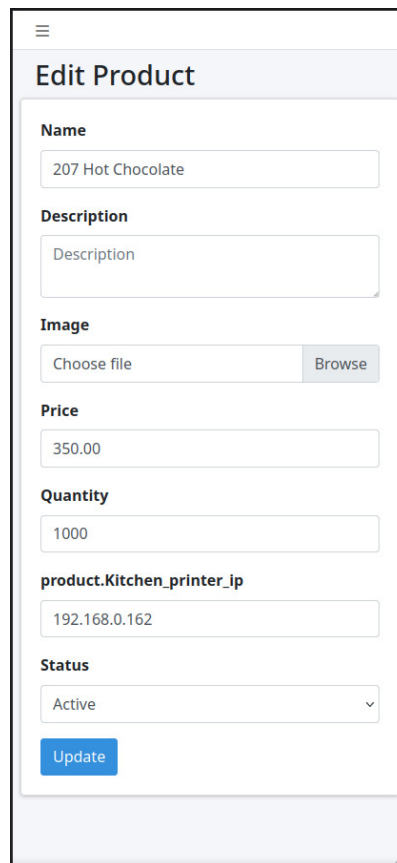

Product Index Page

2. **Product Add/ Edit.** Simple form for editing product.

The desktop view of the 'Edit Product' form features a dark sidebar on the left with a user profile and navigation icons. The main content area has a light blue header with the title 'Edit Product'. Below the header, the form is organized into sections: 'Name' (text input with '207 Hot Chocolate'), 'Description' (text area with 'Description'), 'Image' (file upload with 'Choose file' and 'Browse' buttons), 'Price' (text input with '350.00'), 'Quantity' (text input with '1000'), 'product.Kitchen_printer_ip' (text input with '192.168.0.162'), and 'Status' (dropdown menu with 'Active'). A blue 'Update' button is at the bottom. The footer contains copyright information and the version number 'Version 1.0.3'.

Product Edit Page

The mobile view of the 'Edit Product' form is a simplified version of the desktop layout. It features a light blue header with a hamburger menu icon and the title 'Edit Product'. The form fields are stacked vertically: 'Name' (text input with '207 Hot Chocolate'), 'Description' (text area with 'Description'), 'Image' (file upload with 'Choose file' and 'Browse' buttons), 'Price' (text input with '350.00'), 'Quantity' (text input with '1000'), 'product.Kitchen_printer_ip' (text input with '192.168.0.162'), and 'Status' (dropdown menu with 'Active'). A blue 'Update' button is at the bottom.

Product Edit Page - Mob View

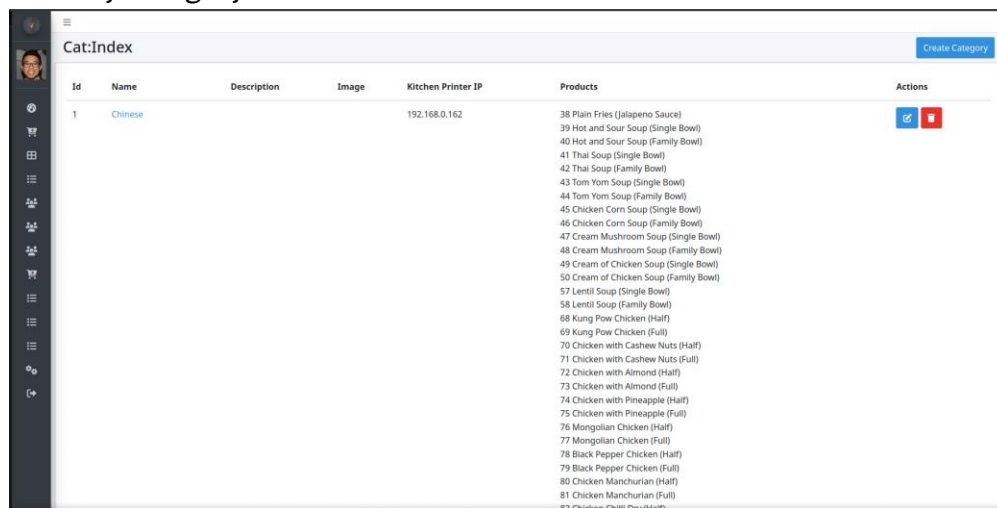

Category System

POS system is designed to group products into categories. In addition to collecting the products into manageable groups, the category system serves two main purposes : -

1. Shops/ Restaurants can be configured to serve only specific categories. This helps in limiting specific products for sale at respective shops/ restaurants.
2. Each category can be assigned to a different *Kitchen Printer* for printing of “Kitchen Order Ticket” token printing.

Pages

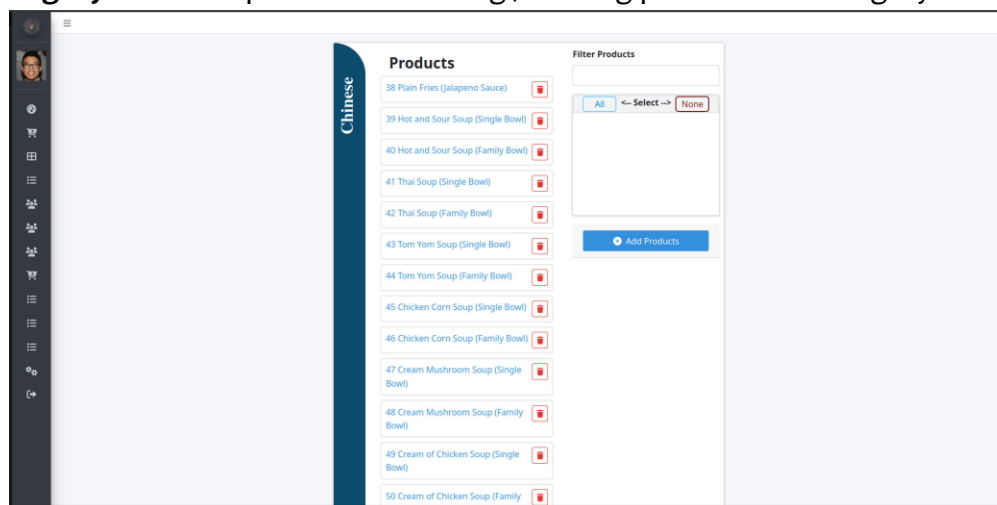

1. **Category Index.** Lists all the categories available in POS System. Users can View/ Edit/ Delete any category.

Id	Name	Description	Image	Kitchen Printer IP	Products	Actions
1	Chinese			192.168.0.162	38 Plain Fries (Jalapeno Sauce) 39 Hot and Sour Soup (Single Bowl) 40 Hot and Sour Soup (Family Bowl) 41 Thai Soup (Single Bowl) 42 Thai Soup (Family Bowl) 43 Tom Yom Soup (Single Bowl) 44 Tom Yom Soup (Family Bowl) 45 Chicken Corn Soup (Single Bowl) 46 Chicken Corn Soup (Family Bowl) 47 Cream Mushroom Soup (Single Bowl) 48 Cream Mushroom Soup (Family Bowl) 49 Cream of Chicken Soup (Single Bowl) 50 Cream of Chicken Soup (Family Bowl) 57 Lentil Soup (Single Bowl) 58 Lentil Soup (Family Bowl) 68 Kung Pao Chicken (Half) 69 Kung Pao Chicken (Full) 70 Chicken with Cashew Nuts (Half) 71 Chicken with Cashew Nuts (Full) 72 Chicken with Almond (Half) 73 Chicken with Almond (Full) 74 Chicken with Pineapple (Half) 75 Chicken with Pineapple (Full) 76 Mongolian Chicken (Half) 77 Mongolian Chicken (Full) 78 Black Pepper Chicken (Half) 79 Black Pepper Chicken (Full) 80 Chicken Manchurian (Half) 81 Chicken Manchurian (Full)	 

Category Index Page

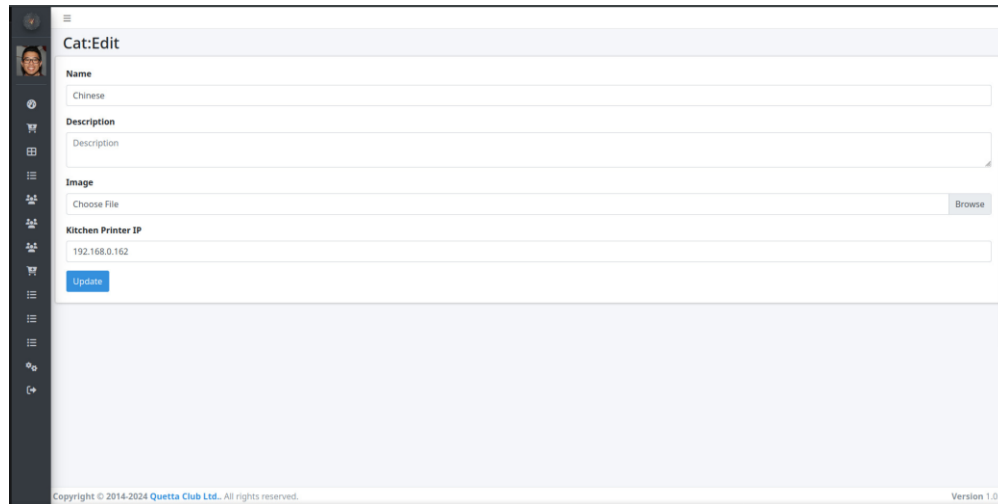

2. **Category View.** Simple form for adding /deleting products to a category.

Products
38 Plain Fries (Jalapeno Sauce) 
39 Hot and Sour Soup (Single Bowl) 
40 Hot and Sour Soup (Family Bowl) 
41 Thai Soup (Single Bowl) 
42 Thai Soup (Family Bowl) 
43 Tom Yom Soup (Single Bowl) 
44 Tom Yom Soup (Family Bowl) 
45 Chicken Corn Soup (Single Bowl) 
46 Chicken Corn Soup (Family Bowl) 
47 Cream Mushroom Soup (Single Bowl) 
48 Cream Mushroom Soup (Family Bowl) 
49 Cream of Chicken Soup (Single Bowl) 
50 Cream of Chicken Soup (Family Bowl) 

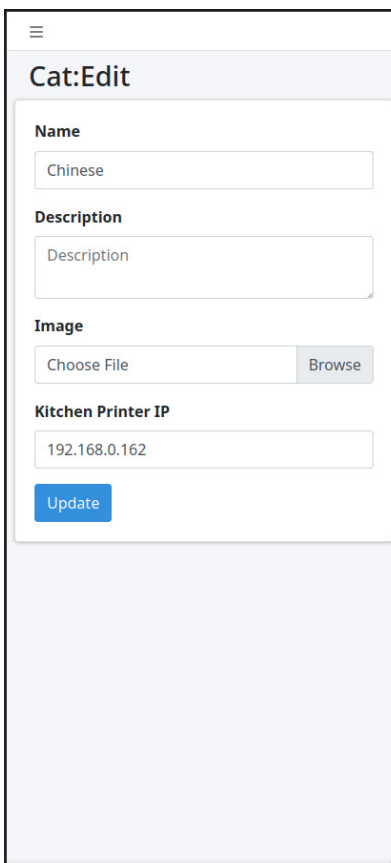

Category View Page

3. **Category Add/ Edit.** Simple form for editing category. Kitchen Printer IP can be set in edit page.

The screenshot shows a desktop web application interface for editing a category. On the left is a dark sidebar with a user profile icon and several menu icons. The main content area is titled 'Cat:Edit' and contains a form with the following fields: 'Name' (with the value 'Chinese'), 'Description' (with the placeholder 'Description'), 'Image' (with a 'Choose File' button and a 'Browse' button), and 'Kitchen Printer IP' (with the value '192.168.0.162'). A blue 'Update' button is located at the bottom of the form. The footer of the page includes the copyright notice 'Copyright © 2014-2024 Quetta Club Ltd. All rights reserved.' and the version number 'Version 1.0.3'.

Category Edit Page

The screenshot shows the mobile version of the 'Cat:Edit' page. It features a hamburger menu icon at the top left. The form fields are arranged vertically: 'Name' (value: 'Chinese'), 'Description' (placeholder: 'Description'), 'Image' (with 'Choose File' and 'Browse' buttons), and 'Kitchen Printer IP' (value: '192.168.0.162'). A blue 'Update' button is positioned below the IP field. The page has a clean, minimalist design with a light blue background.

Category Edit Page - Mob View

Shops Management

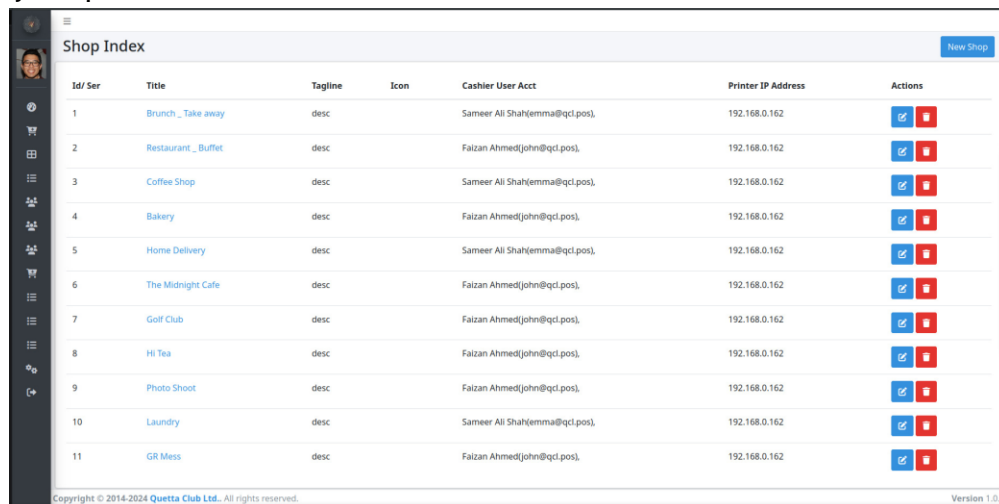

Shops are virtual entities that are used to sell products to users. A Shop has following fields to hold specifications :-

- ID
- Name
- Description
- Printer IP
- Categories

Just like Products, Shops need to be set up once before functioning of the system. At later stages new shops can be created and existing shops can be edited, deleted or updated as per requirement. Typical usage includes opening of a new restaurant.

Pages

1. **Shops Index.** Lists all the shops available in POS System. Users can View/ Edit/ Delete any shop.

Printers Management

POS System allows you to print saved Orders only. This is to keep from accidental order / KOT printing by novice users. Prints can be triggered from the Order print button group found in orders index page or when viewing an order at the order show page.

Order Print Buttons

PDF Prints

All orders can be printed as a pdf file. This is useful for previewing the bill before printing to printer. It is also useful for record keeping and viewing old orders. The bill shows different text (Paid, Chit or Part-Chit) based on payment info.

Part-Chit Order

POS Prints

POS prints are sent automatically to Shop Printer configured in Shop settings.

KoT Prints (Kitchen Order Tickets)

KoT prints are sent automatically to Kitchen Printers based on product categories for printing tickets/ tokens.

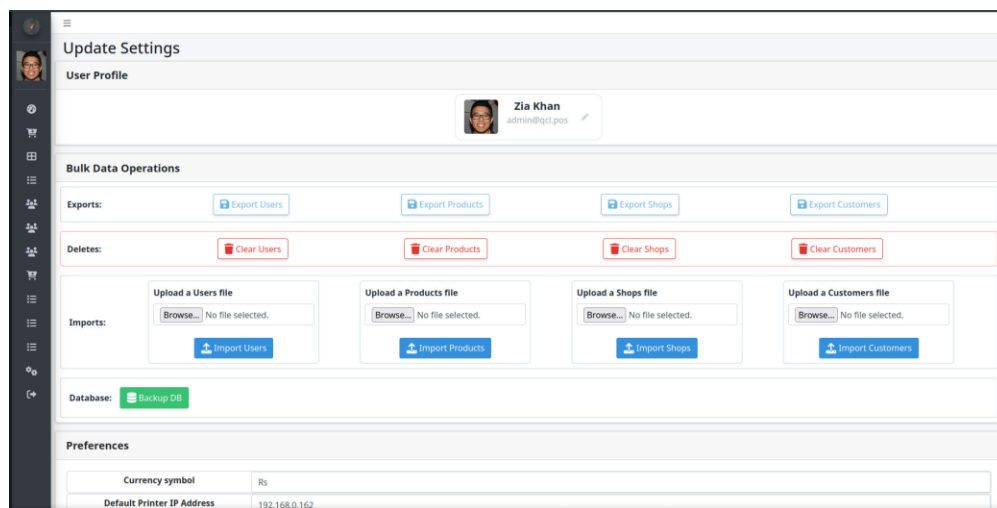

Advanced Operations

Backups/ Restore

Backups

The system supports backing up existing records in excel format. Following entities can be backed-up :-

1. Users
2. Shops
3. Products (including categories)
4. Customers

Backups

Restoration

Backup files (.xlsx) can be used to restore the system to a previous state in case of errors. Please note that restore is a delicate process and only valid excel files can be used. In case of any error the complete file will be rejected.

Reports

System generates automatic reports based on user filters. Common filters include : - 1. Date Range. 2. Shops for which records need to be filtered.

System generates following reports : -

Shop Sale Report

This is a sale report. It groups shop-wise the sales performed during the selected date range. Report can be used to close a sales day.

Products Report Excel

Usage Guides

Setting up Staff

1. Prepare a list of all employees that will be using the system.
2. Enumerate the roles of all staff members, i.e cashiers, admin, order-takers, etc.
3. Goto *Users Index* page and click on “Add New” button.
4. Fill the form for creating a new user and hit “Submit”.

• **Note:** Password fields are mandatory for new users, however old users’ data can be updated without changing password if password field is left blank.

Setting up Products

1. Prepare a list of all products that will be added in the system.
2. Goto *Settings* page and click on “Export Products” button to get a sample excel sheet.
3. Edit the downloaded excel sheet with following columns :

Ser	Field Name	Remarks
a.	‘id’	Optional field (Leave unchanged if you are updating existing menu).
b.	‘name’	Product Name.
c.	‘description’	Product Description (Serving, no of bowls, size, etc).
d.	‘category’	Name of category (See Category System for details).
e.	‘price’	Price of product.
f.	‘created_at’	Optional field.

4. Goto *Settings* page and see “Upload a Products File”. Hit the “Browse” button and submit your excel file for uploading.
5. Click on “Import Products” button after file selection and wait for system redirect.
6. If you are taken to *Products Index* page with message “All Ok”, all your products have been uploaded.
7. In case you are redirected back to *Settings* page, there was an error processing the file. recheck all entries and try again.

• **Note:** Bulk Uploading via excel files is prone to error if empty fields or invalid data is present. Please sanitize excel file carefully before uploading.

Setting up Categories

1. If category name is uploaded in excel sheet (Products.xlsx), it automatically creates required categories. Printer IPs are however still required to be configured one by one.
2. New Categories can be added like other entities.
3. Products need to be removed from all categories before re-assignment. (Product can be added in only 1 category at a time.)

Setting up Shops

1. Prepare a list of all shops/ restaurants that will be requiring the POS system.
2. Enumerate the categories that the shop will be serving.
3. Goto *Shops Index* page and click on “Add New” button.
4. Fill the form for creating a new shop and hit “Submit”.

• **Note:** *New Shops don't have any categories assigned by default. Assign categories to any shop in Shop Edit Page.*

Setting up Printers

POS System uses two thermal printers for every order. These are :-

1. **POS Prints** (*Customer/ Shop bill*). Shop Bill is the main order print for every order. It shows Shop info, Customer info, items, quantities, rates, prices and discounts. This bill can be handed over to customer and copy can be kept at shop for record keeping purposes. For setting up a thermal printer to a shop, use *Shop Edit* page for setting “Shop Printer IP” address of the printer. Now shop bill prints will be automatically printed on this printer.
2. **KoT Prints** (*Kitchen Order Ticket*). KoT prints the tickets for item preparation at kitchen, etc. Each category of products can be assigned a separate network thermal printer. This printer is configured in *Category Edit* page, set the “Kitchen Printer IP” to use the print function.

• **Note:** *Both bills can be printed on a single network thermal printer, however it is advised to keep separate printers for these jobs.*

Managing Shop Categories

Shops/ Restaurants can only serve item categories assigned by the admin. For assigning a category to a shop, go to *Shop Edit* page and select the categories you wish to serve from the shop, hit “Update” button to save changes.

Thank You!

We believe in designing the best technology, fast, smooth, and user-centric.

We're proud of what we've accomplished with the QCL POS. It is a product in which every piece of hardware and software works together.

We hope this user manual has been helpful in getting you started with our product.
